

For Release 4.22.10

Envirepel Energy, Inc. ("EEI"), a privately held company in Vista, California, announced today it has signed Licensed Technology Agreements for South East Asia with EcoTech Energy Solutions, based in Estes Park, Colorado.

EcoTech Energy has established Waste recovery, recycling, and energy production opportunities from Urban waste supplies in the Philippines and has signed a License to bring Envirepel Energy's Waste to Energy Technology to South East Asia. EcoTech is also developing Wind energy projects in the same region with offices in Manila. EcoTech's website is [www.ecotechenergysolutions.com](http://www.ecotechenergysolutions.com)

Over the past six years, EEI has designed, developed, manufactured and built the first of its kind low emissions combustion system. This ultra low combustion system consumes urban waste that would normally go in a landfill, and also has the capacity to consume high sulfur coal, tires, animal waste and many other "biomass" feed stocks that would pose a significant pollution problem to other power generating, or bio - fuel production facilities. EEI's website is [www.envirepel.com](http://www.envirepel.com)
